“My experience with iCEDQ (both tool and product team) has been very pleasant till date. ”

Pros: The possibility of 'Continuous Integration' and ease of use of the software is something I like about this tool. Besides that it is bundled with functions that will make your day to day operations easier to handle. Today I can say my customers are confident of the data shown in my application because of iCEDQ! That is the quality the tool offers! I would also like to mention on the product team who have always been very supportive, very approachable and very professional with quick turn around on queries. All-in-all a very good experience with the software and the product team.

Cons: Few initial hiccups with the infrastructure during the set up of the tool. Don't recall anything else besides this!
